

FOR IMMEDIATE RELEASE**PREO ISR and Advanced Drone Solutions Launch Strategic Leasing Partnership to Accelerate UAS Adoption**

Dallas, TX — January 7, 2026 — PREO ISR, LLC and Advanced Drone Solutions (ADS) today announced a new strategic partnership to deliver flexible leasing programs that make ADS's unmanned aircraft systems more accessible to government, public-safety, and commercial operators.

A Streamlined Path to Modern UAS Capabilities

Through this agreement, PREO ISR will develop and administer customized leasing solutions that reduce upfront costs and accelerate the deployment of ADS technologies. ADS will provide technical data, pricing, warranty support, and timely fulfillment for leased products, including the Stratos™ mission platform equipped with ADS's NavDome™ navigation layer.

The partnership offers agencies and enterprises a simplified way to adopt and scale drone operations. PREO ISR's specialized leasing model—combined with ADS's mission-ready Stratos platform and its integrated NavDome™ technology—enables customers to access high-performance systems without the capital burden typical of procurement cycles.

Advanced Capabilities Through NavDome™ and Stratos™

NavDome™, ADS's operational GPS-denied navigation system, enables reliable flight where traditional GPS or compass data is degraded or unavailable. When deployed on the Stratos™ mission platform, the combined system supports a wide range of missions, including infrastructure inspection, public-safety operations, emergency response, exterior cleaning workflows, and other complex facility operations. ADS is also evaluating future applications in fire-response scenarios as part of its long-term development roadmap.

Under the collaboration, PREO ISR and ADS will co-market leasing-enabled offerings at trade shows, customer briefings, and across digital channels.

Leadership Commentary

“Agencies want modern capabilities, but traditional procurement often slows them down,” said Pete Ring, CEO, PREO ISR. “Our partnership with ADS removes those barriers and helps operators field advanced systems more quickly.”

12-Month Collaboration Framework

The initial 12-month collaboration period will focus on developing the joint leasing program, engaging with early operators, supporting pilot deployments, and refining system configurations based on customer feedback.

About PREO ISR, LLC

PREO ISR provides tailored aircraft, UAS, and mission-equipment leasing solutions for government, law-enforcement, and commercial operators, enabling rapid acquisition of critical capabilities without significant upfront investment.

About Advanced Drone Solutions

Advanced Drone Solutions develops mission-platform and navigation technologies for autonomous operations in challenging environments. The company's NavDome™ system enables reliable flight where GPS or compass data is degraded or unavailable, and is delivered today on ADS's Stratos™ mission platform, with future availability planned as an integration package for third-party UAS platforms. ADS's solutions support a range of applications, including public safety, infrastructure inspection, emergency response, exterior cleaning workflows, and other complex facility operations.
